In mathematics, topology (from the Greek $\tau\omicron\pi\omicron\varsigma$, place, and $\lambda\omicron\gamma\omicron\varsigma$, study) is concerned with the properties of space that are preserved under continuous deformations, such as stretching, twisting, crumpling and bending, but not tearing or gluing. An n -dimensional topological space is a space (not necessarily Euclidean) with certain properties of connectedness and compactness.

Brouwer's fixed-point theorem is a fixed-point theorem in topology, named after L. E. J. (Bertus) Brouwer. It states that for any continuous function mapping a compact convex set to itself there is a point such that $f(x) = x$. The simplest forms of Brouwer's theorem are for continuous functions from a closed interval in the real numbers to itself or from a closed disk to itself.

(2018-05-23) Definitions and notations (inherited from tradition). The equal sign may be used to say that a scalar is the sum of a series. A (formal) series is just a vectorial object consisting of an infinite sequence of scalar coefficients (called terms). The formal series of general term a_n is denoted: $\sum_{n=0}^{\infty} a_n$.
